

THE GEOMETRIC ARCHITECTURE OF RELATIONAL COHERENCE

2026 System Blueprint &
Deployment Topography
(Broughton, 2025)

The System Architecture Cascade

The Operational Pillars

Human Readiness Architecture (HRA) Topography

True coherence requires simultaneous alignment across 5 intrinsic capacities, governed strictly by 4 structural branches.

Capacity & Governance Intersection Matrix

Legend:  – Active Monitoring Node  – Structural Constraint Mechanism

The 85 Skill Set Library Allocation

Note the architectural weight assigned to translating the 21 Universal Principles into active practice.

The Five Execution Nodes

Operationalizing the 85 Skills through specialized systemic functions.

2026 Applied Projects: Proof-of-Concept Stack

Theory transitions to topography. The 5 roles lock together, powered by the 85-skill library and governed by the HRA, creating a self-sustaining engineering stack ready for live deployment.

The Deployment Ecosystem

Systemic architecture deployed across highly sensitive human domains, utilizing continuous closed-loop feedback for perpetual relational coherence.
